SERVER BASED PHOTO MANAGEMENT SOLUTION

- There are many digital photo and media management software, but... they are for standalone usage;
- There are many digital asset management solutions (DAM), but... they are too expensive for small teams;
- **Daminion is a true multi-user media management system for small teams and creative professionals at an affordable price.**

A SPECIAL LOW PRICE FOR SMALL TEAMS

From the very beginning, Daminion was developed for small teams with tight budgets. The price scheme is simple and affordable. Visit our online store now to check it out!

Daminion will bring a good return on your investment (ROI)

BETTER SECURITY THAN WEB-BASED SOLUTION

A web-based solution is the best choice for large companies with multiple geographical locations. But, if your team is small - the desktop solution has solid advantages:

- Better security - all your content remains inside your firewall
- Better performance, no web-browser limitations, and a comparable upgrade time.

BROAD FORMAT SUPPORT

Daminion supports a huge number of media formats including raster, vector, camera RAW images, video, music and PDF files. Besides media formats, Daminion can also read/write tags from/to XMP, IPTC, EXIF metadata in a wide range of media formats including video and camera RAW formats.

CONTROL ACCESS TO CONTENT

- Daminion protects your database (catalog) from accidental “screw-ups.” by **User Roles**. For example, users with Reader or Guest roles are unable to change or remove assets. They can only search, view, or export the assets in accordance with the permissions assigned to their roles.
- **Version Control** allows to avoid work being redone because you’ve lost your original versions! You can always find out easily who made what changes to your content - and why.

INTEGRATION WITH EXTERNAL SYSTEMS

- Metadata is the best way to exchange information between different systems. With XMP, you won’t have to depend on various API versions of various other systems. Daminion will read/write metadata in many formats including image, camera RAW, vector, video, audio and PDF files.
- Daminion Export SDK allows you to expand your Daminion export capabilities by writing export add-ons.

SUPPORTED MEDIA FORMATS

Daminion supports a huge number of media formats including raster, vector, camera RAW images, video, music and PDF files.

Raster Image Formats

JPEG, TIFF, PSD, GIF, PNG, JPEG 2000, BMP, ICO, TGA, DCX, Portable pixmap, Portable graymap, Portable bitmap, CUR
