

How to Auto-Tag Your Photos

Before starting auto-tagging your photos, you need to get Google Cloud Vision API key and activate it in Daminion server administration panel. Please learn how to do this [here](#) and [here](#).

Once Auto-Tagging is enabled in Daminion server administration panel, open your shared catalog in Daminion desktop application.

Select one or more files, right-click them and navigate to "Actions>Generate AI Labels". Alternatively, click the "Item" tab and navigate to "Actions>Generate AI Labels".

The process can take some time. You can monitor the number of generated labels via Tags Panel > AI Labels
