

IMAGE, VIDEO AND DOCUMENT MANAGEMENT SOLUTION FOR CREATIVE PROFESSIONALS

Reduce time and cost of asset retrieval and content production

Instant Access to Any Assets
Integration with Other Systems
Export with Optimizations on Demand

Store Data Inside The Files
Easy Asset Cataloguing
Broad Format Support

INSTANT ACCESS TO ANY ASSETS

Assets you can't find are JUST AS USELESS as assets that are completely lost! Daminion's easy-to-use, but powerful search capabilities includes: Quick Search, Filter Content By Tags in combining with AND/OR operations, Advanced Search and Saved Searches.

EASY ASSET CATALOGING

The better your assets are cataloged, the less time you will spend on searching for your files, and more time working current projects. Further, tagging all copyrighted materials will help prevent unlawful usage of images and content.

INTEGRATION WITH OTHER SYSTEMS

Metadata is the best way to exchange information between different systems. With XMP, you won't have to depend on various API versions of various other systems. Daminion will read/write metadata in many formats including image, camera RAW, vector, video, audio and PDF files.

STORE DATA INSIDE THE FILES

All a file's information, including copyright information, is stored as metadata. Whenever you copy, email, or publish your asset, all its file information travels along with it. Ownership of an asset and its usage rights will also be included in the metadata.

EXPORT WITH OPTIMIZATIONS ON DEMAND

Export your media files with selected conversion rules with a single click. Your files will be optimized for uploading to Flickr or Facebook (as JPEG 1000 px). Or you can insert your optimized images to PowerPoint (as PNG 800 px - 72 dpi). Convert your files on demand without multiple file duplicates of different image sizes and formats.

BROAD FORMAT SUPPORT

Daminion supports a huge number of media formats including raster, vector, camera RAW images, video, music and PDF files. Besides media formats, Daminion can also read/write tags from/to XMP, IPTC, EXIF metadata in a wide range of media formats including video and camera RAW formats.
